CONTENTS

ABOUT US

The aim of LAN LINK technology is to serve the best and high quality services to our clients. We set high standards of integrity for our peoples at all levels and consistently strive to meet them.

We have envisioned to be become top and leading system integrator in the world and create high skilled jobs to become vital part of Pakistan and Global Economy.

We have amplified our expertise in a various field of technologies and today LANLINK team is enable for providing services for electrical , mechanical, HVAC, and Data network Solutions.
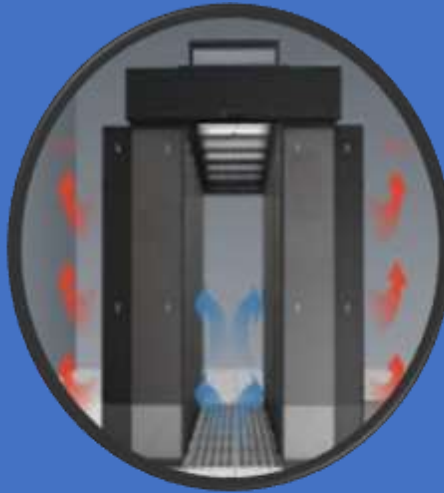

Taking our themes forward we are laying the ground for all our business divisions to achieve continued growth in any market environment.

SOLUTIONS

HVC SOLUTION AND SERVICES

COLD AND HOT AISLE CONTAINMENT

POWER ANALYSIS THERMOGRAPHY

POWER AND UPS SOLUTION

CCTV AND ACCESS CONTROL CAMERA SOLUTION

**FIRE DETECTION AND SUPPRESSION SYSTEM**

HVAC

LANLINK is a best provider of HVAC solutions. Our core business is the designing HVAC systems, supply, installation and commissioning , Troubleshooting , Training & technical Support ,Parts & Consumables ,undertake post sales service ,maintenance of high integrity HVAC systems and equipment. We provide advanced, high-quality air conditioning solutions for residential, commercial and industrial facilities.

Making sure your system is running as efficiently as possible is critical to your buildings operational costs.
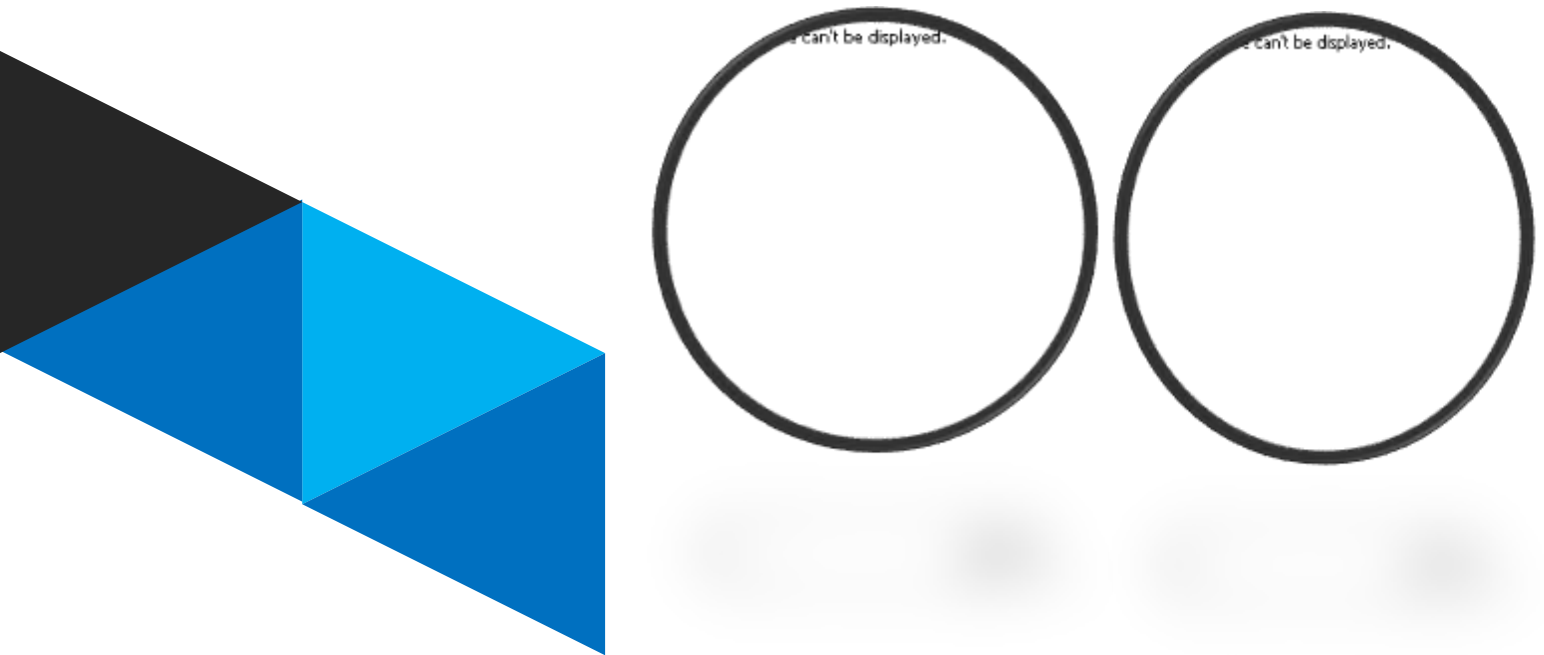

We can also provide the improvement of old HVAC systems to increase its cooling capacity.

CONTAINMENT

 LANLINK technology provides local and imported hot and cold containment system to increases the cooling capacity and energy efficiency of the cooling unit and increased capacity, together with the separation of hot and cold air, makes it possible to cool higher heat loads per rack and also removes the mixing of hot and cold aisle air.

Cold aisle containment systems are very efficient when it comes to the amount of energy used in the cooling process. This leads to huge savings when it comes to lowering the cost of operating data centers, where energy has been one of the largest expenses.

POWER ANALYSIS THERMOGRAPHY

LANLINK is the best provider of Thermography that can help uncover mechanical faults such as hot spots in addition to identifying irregularities in electrical devices. A thorough investigation can reveal regions where high heat could jeopardize data center network resilience.

Power analyzers can be used to measure the flow of energy in either alternating current (AC) or direct current (DC) systems – with distinct considerations for measuring AC circuits.

It performs the operations such as

- Efficiency mapping;
- Fast Fourier Transform (FFT) and harmonic analysis;
- Fundamental power and root mean square (RMS) values;
- Polar diagrams and symmetrical components;
- Space vectors and DQ-currents.

POWER

LANLINK offers the commercial and industrial facility. LANLINK supplies installs and commission high performance, right-sized, modular, hot-scalable, single phase and 3-phase power protection with ultra-high availability and efficiency for any size data center or high density power zone.

LANLINK supply UPS systems, parts of UPS system, scalable and hot swappable UPS systems ,troubleshooting and maintenance . UPS protect critical loads from utility-supplied power problems, including spikes, brownouts, fluctuations and power outages, all using a dedicated battery.

CCTV and Access control

We are committed to provide our customers best possible security services as there is nothing more important than the safety of Life & Property. LANLINK offers a comprehensive range of both IP and Analog CCTV Systems. The effectiveness of these CCTV security cameras has resulted in their deployment into major international airports, schools, organizations, government projects, industrial and commercial facilities as well into small retailers and homes.

LANLINK provide a flexible, open architecture, IP-enabled platform for deploying a broad range of access control systems. State-of-the-art access control software that integrates the most advanced security technologies with innovative networking capabilities to bring you full-featured security solutions serving any size facility.

Fire detection and suppression system

LANLINK provide properly designed and selected fire detection and notification system that is essential component of overall data center protection strategy. Data centers need fast-acting fire suppression solutions to protect critical assets. Fire or physical security breach can compromise billions of files in data centers. These centers cannot afford to be digitally or physically compromise.

The primary fire protection systems used within data centers typically include: wet pipe sprinklers, pre-action sprinklers, and special suppression (i.e., clean agent, inert gas, or mist).
